                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
The specification describes antisense oligonucleotides (AAX52869-X55271) CC directed against at least 2 mRNAs selected from target genes, coding and conn-coding regions of RNAs corresponding to target genes, gene coding regions, gene militation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one cor more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target coligonucleotides (specifically AAX55180-271) can be used for the coligonuc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antisense oligonucleoride; multiple target; antisense treatment; impaired respiration; inflammation; lung disease; pulmonary vasoconstriction; inflammation; allergic rhinitis; acute asthma; allergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; breast cancer; lung cancer; pancreatic cancer; hepatic metastasis;

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination combination

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAH3633 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the name of the primerion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 1 send sequence, where the combination of oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human NADP hydrogenase subunit

Included in the invention are nucleotide and amino acid sequences for NADP hydrogenase 50 subunit, a vector containing the cDNA sequence, a host cell transformed with the vector, and an antibody directed against the protein. The polypeptide and polynucleotide can be used in the diagnosis and treatment of cancer, haemopathy, HIV infection, immunological diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NADP hydrogenase subunit 50 and encoded polynucleotide, applicable in diagnosis and treatment of cancer, hemopathy, HIV infection, immunological diseases and inflammation -

The present invention relates to the cloning and sequencing of the cluster encoding a modular type I polyketide synthase (PKS) enzyme involved in the biosynthesis of the macrolide antibiotic nystatin. The nystatin PKS is useful as antifungal antibiotics. The present sequence is a Streptomyces noursei nysl DNA of nystatin PKS gene cl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the cloning and sequencing of the cluster encoding a modular type I polyketide synthase (PKS) enzyme involved in the biosynthesis of the macrolide antibiotic nystatin. The nystatin PKS is useful as antifungal antibiotics. The present

The present invention relates to synthetic HIV protein expression cassettes. The present sequence is the coding sequence of a synthetic HIV Env expression cassette. In, addition, synthetic HIV Gas expression cassettes have been constructed. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassettes of the present invention may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).

Expression cassettes encoding the human immunodeficiency virus Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS) -
                                                                                                                                                        WPI; 2000-452400/39
                                                                                                                                        (HIV)
```

Claim 19; Fig 24; 391pp; English

The present invention relates to synthetic HIV protein expression cassettes. The present sequence is the coding sequence of a synthetic HIV Env expression cassette. In, addition, synthetic HIV Gag expression cassettes have been constructed. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassettes of the present invention may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired mmunodeficiency syndrome (AIDS).

                                                                                                                                                                                                                                                                                                                    Barnett S
Greer C,
                     The present invention relates to synthetic HIV protein expression cassettes. The present sequence is the coding sequence of a synthetic HIV Env expression cassette. In, addition, synthetic HIV Gag expression cassettes have been constructed. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassettes of the present invention may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).
                                                                                                                                                                                                                           Expression cassettes encoding the human immunodeficiency virus Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS) -
                                                                                                                                                                                                                                                                                                                                                                                           31-DEC-1998;

The present sequence is the coding sequence of a synthetic HIV Early expression cassette. In, addition, synthetic HIV Gag expression cassettes have been constructed. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-enry steps in viral replication. The expression cassettes of the present invention may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ΛIΗ

The present sequence is the coding sequence of a synthetic HIV Env expression cassette. In, addition, synthetic HIV Gag expression cassettes have been constructed. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassettes of the present invention may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim

                                                                                              The present invention relates to synthetic HIV protein expression cassettes. The present sequence is the coding sequence of a synthetic HIV Env expression cassette. In, addition, synthetic HIV Gag expression cassettes have been constructed. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in, viral replication. The expression cassettes of the present invention may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired
                                                                                                                                                                                                                                                                                  Expression cassettes encoding the human immunodeficiency virus Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS)
                                                                                                                                                                                                                                                                                                                                                                        Barnett S, Zur

Novel modified HIV Env preparing a vaccine to of HIV subtypes polypeptides useful as immunizing agents and elicit an immune response against a broad ran

Claim 14; Page 118; 139pp; English.

first composition comprising a polynucleotide encoding the Env polypeptide in a priming step and administering a second composition comprising a modified Env polypeptide as a booster in an amount sufficient to induce an immune response in the individual. The first and/or second composition further comprises an adjuvant (claimed). The intracellularly produced Env polypeptides can be used for a number of diagnostic and therapeutic purposes to determine the presence of reactive antibodies/and or Env proteins in a biological sample to aid in the diagnosts of HIV infection or disease status or as measure of response to Novel immunogenic modified human immunodeficiency virus (HIV) envelope (Env) polypeptides having an amino acid deleted or replaced in the region corresponding to residues 420-436 or 119-123 and 199-210 relative to isolate HXB-2 are disclosed. The modified Env polypeptide is based on HIV strain SF162, with numbering relative to isolate HXB-2. The Env polypeptides are modified so as to expose at least part of the CD4 binding region. The modified HIV Env polypeptides, coding polypucleotides and constructs, further comprising an adjuvant, are used for inducing an immune response in an individual. The method involves administering a
